PROJECT INTRODUCTION

- Ad Natura, Latin for “to nature”
- Set out to create an immersive game centered around slime mold organisms
- Emphasis on unique gameplay features and depth of storytelling
- Leaves players with thought provoking questions on the enduring nature of “collective will”

Idle behaviour

Exposure to water
on the floor

An improved Slime Mould Algorithm using multiple strategies

Design Algorithm

Results

CONCLUSION: The convergence speed, solution accuracy and robustness of MISMA are significantly better, and each improvement strategies can address defects in each stage of SMA with synergistic effects.

Zhu, M., Zhu, R., Li, F., & Qiu, J. (2024). An improved slime mould algorithm using multiple strategies. *International Journal of Parallel, Emergent and Distributed Systems*, 39(4), 461–485. <https://doi.org/10.1080/17445760.2024.2350010>

SLIME 1

SLIME 2

SLIME 3 (WITH ME)

GAME BACKSTORY

- In the year 2100, the world is falling into ruin due to the “Calamity”
- Caused by human pollution wherein broke free a prehistoric virus underneath the permafrost
- Player is tasked with fighting off the spread of the Calamity through various means to save their walled city

Gameplay Showcase

SLIME MOLD FEATURES

- Attraction towards water
- Organic object decomposition
- Climbable slime
- Hazard avoidance and death
- Spore dispersal and reproduction

GAMEPLAY FEATURES

- Procedural Calamity object Generation
- Physics based water system
- Modular object destruction Pipeline
- Material based water absorption

USABILITY ANALYSIS

- Simple and intuitive control scheme
- Stable on desktop devices using Windows, Mac, or Linux
- Positive user feedback on artistic direction and message conveyance

“The art style and environment, plus the visual of the slime spreading is very satisfying”

— Beta Tester

ROAD TO LAUNCH

- Improve processing performance
- Graphics setting profiles
- Additional levels with further lore and exposition
